EDUCATION

University of Washington

Bachelor of Science in Computer Science, Minor in Business (GPA: 3.68)

Seattle, WA

Sept. 2024 – present

Highline College

Associate of Arts (GPA: 3.98)

Des Moines, WA

Sept. 2022 – June 2024

TECHNICAL SKILLS

Languages: Java, Python, SQL, C++, C, JavaScript, HTML/CSS

Frameworks & Technologies: React, Next.js, Node.js, Ollama API

Developer Tools: Git, GitHub, GitHub REST API

Design: Figma, Adobe Illustrator, Canva

EXPERIENCE

Philips

Acoustic Engineering Intern

June 2026 – Present

Bothell, WA

- Designed and implemented a version-controlled preset management architecture enabling rollback and restoration of ultrasound imaging presets across software releases
- Developed Python and C++ tools to automate preset recovery, deployment, and validation workflows, improving consistency across multiple ultrasound imaging platforms
- Built an on-cart batch configuration feature that applies imaging parameter changes across all presets associated with a transducer, reducing preset configuration time by 87%
- Created internal developer tooling integrating Git workflows, automated documentation generation, pull request management, and parameter-level configuration review to streamline preset delivery

University of Washington

Undergraduate Teaching Assistant

Sept. 2025 – Present

Seattle, WA

- Supported 300+ students in lecture and led weekly quiz sections for 20+ students, reinforcing algorithms, data structures, and programming fundamentals
- Provided individualized academic support through office hours, assisting 100+ students with debugging, problem solving, and course concepts
- Graded and evaluated 9 major programming projects, delivering actionable technical feedback to improve code quality and software development practices
- Mentored students through one-on-one interactions, helping strengthen programming proficiency, debugging skills, and confidence in computer science coursework

PROJECTS

Legacy Restore | Python, C++, Database Design, Automation

June 2026

- Designed and developed a restoration platform for recovering and managing legacy ultrasound machine presets across multiple imaging systems
- Built a scalable database and directory architecture supporting storage, retrieval, and migration of historical preset configurations
- Developed C++ automation tools that streamlined preset recovery workflows and improved deployment consistency
- Reduced preset demo setup workflow time by approximately 70% through configuration management processes

Philips Delivery Tool | Python, Git, GitHub REST API, JSON, GUI Development

June 2026

- Reduced preset delivery time from 8 hours to 1.5 hours by consolidating Git workflows, documentation generation, pull request management, and preflight execution into a single application
- Built a Python GUI that unified preset delivery workflows including Git operations, pull request creation, reviewer assignment, and change documentation
- Integrated the GitHub REST API to automate reviewer selection, approval tracking, and pull request management
- Developed a custom JSON diff engine for preset parameters, eliminating manual review of large configuration files

NextStep | HTML/CSS, JavaScript, Python, Node.js, Ollama API, Git

Oct. 2025

- Built an AI-powered job matching platform that analyzes resume content and recommends opportunities
- Developed a multilingual Chrome extension featuring AI chatbot functionality and real-time translation support
- Engineered an automated resume translation and generation pipeline that converts foreign-language experience into ATS-friendly U.S.-style resumes
- Collaborated in an Agile team environment using Git and GitHub for version control and project management
